HEALTH PROFILE REPORT

1970 through 1982

by

State and County

July 1984

Public Health Statistics
INDIANA STATE BOARD OF HEALTH

INTRODUCTION

Drawn from reports of county data as listed in Sources of Data, the Indiana Health Profile was first compiled and published in 1970. It was aimed at the needs of health planning and based on a concept of "community diagnosis."

This report covers a 13-year span of time (1970-1982) and includes six years of data. Some comparison can be made for each county by decade.

These county profiles, arranged alphabetically, are prepared on a biennial basis and provide numerous indicators of county "status" in relation to the State. Items include geopolitical, demographic, socioeconomic, and health categories.

The Public Health Statistics office offers assistance to anyone interested in developing analyses of these and other health data.

For further information, please call (317) 633-0307 or write the Indiana State Board of Health, Division of Public Health Statistics, 1330 West Michigan Street, P.O. Box 1964, Indianapolis, Indiana 46206.

SOME COMMONLY UTILIZED RATES AND RATIOS

Crude Birth Rate = $\frac{\text{Number of Live Births}}{\text{Total Population}} \times 1000$

Crude Death Rate = $\frac{\text{Number of Deaths from All Causes}}{\text{Total Population}} \times 1000$

Cause Specific Death Rate = $\frac{\text{Number of Deaths from a Specific Disease}}{\text{Total Population} \div 100{,}000}$

Maternal Death Rate = $\frac{\text{Number of Maternal Deaths}}{\text{Number of Live Births}} \times 100{,}000$

Infant Death Rate = $\frac{\text{Number of Deaths Under One Year of Age}}{\text{Total Number of Live Births}} \times 1000$

Neonatal Death Rate = $\frac{\text{Number of Deaths Under One Month of Age}}{\text{Total Number of Live Births}} \times 1000$

Morbidity Rate = $\frac{\text{Number of Cases of a Specific Disease}}{\text{Total Population}} \times 100{,}000$

Case Fatality Rate = $\frac{\text{Number of Deaths from a Specific Disease}}{\text{Number of Cases of the Disease}} \times 100$

Stillbirth Rate = $\frac{\text{Number of Stillbirths}}{\text{Number of Live Births}} \times 1000$

Premature Birth Rate = $\frac{\text{Number of Births Under } 5\frac{1}{2} \text{ lbs.}}{\text{Number of Live Births}} \times 1000$

Dependency Ratio = $\frac{\text{Population Under 18 Plus Population 65 \& Over}}{\text{Population 18 to 65}}$

(See 1970 Health Profile Report for Dependency Ratios)

Vital Index (Birth-Death Ratio) = $\frac{\text{Number of Births}}{\text{Number of Deaths}} \times 100$

(100 and over indicates a biologically-growing population)

Total Birth Rate - Live Birth Rate = Stillbirth Rate

Stillbirth Rate + Neonatal Death Rate = Perinatal Death Rate

REFERENCE NOTES

Table 1	1 - Contact Public Health Statistics for further population breakdowns.
Table 2	The Percent Households by Income Range information is not comparable year-by-year due to changes in the consumer price index over time.
Table 4	2 - As of January 1, 1978, coverage was extended to include private and public schools, state and local government units (including county hospitals), some private household workers, and some agricultural workers. The coverage of domestics did not significantly increase employment in the services group in any county. However, seasonal agricultural workers, such as corn detasslers, when working for a covered employer, caused significant increases in the service industries group in a few counties.
Table 5	The Eighth Revision of the INTERNATIONAL CLASSIFICATION OF DISEASES, ADAPTED was used from 1970 thru 1978. Similarly, the Ninth Revision of the INTERNATIONAL CLASSIFICATION OF DISEASES has been in use since 1979.
Table 10	Incidence is the only currently available data.
Table 11	1981 and 1982 figures for Local Health Appropriations reflect local health expenditures obtained from the State Budget Agency. Previous figures were obtained from the most reliable sources available. For some years prior to 1981, the figures tend to be biased toward the high side.

NA - Not Available

-- - Quantity is zero
